HIREVUE

Company, Product and SEO Research Report

October 2026

Based on a read-through of hirevue.com (home page, product pages, blog and a use-case page), plus pricing write-ups and company databases. Figures that come from HireVue itself are marketing claims, not independent findings.

1. Overview

HireVue makes software that helps employers screen, assess and interview job candidates. Founded in 2004 around recorded video interviews, it now describes itself as an AI hiring platform with the tagline "Make confident talent decisions".

Products are organised into four stages of the hiring funnel (Engage, Screen, Assess, Interview), and results feed into one candidate skill profile. HireVue says 40% of the Fortune 100 use it. It sells mainly to large employers that hire in volume, such as retailers, airlines, hospitals, banks and manufacturers.

2. Company at a glance

Item	Detail
Founded	2004
Headquarters	Sandy, Utah (PitchBook)
Employees	About 400 (PitchBook; may be out of date)
Ownership	Private; roughly $391M raised (PitchBook)
Recent launches	Assessment Builder (19 Feb 2026); AI Interviewer press launch (16 Jun 2026)
Recent acquisition	Hireguide technology (agentic AI, voice interviewer), announced 10 Mar 2026
Science claims	1,300+ construct validity studies, 2,000+ fairness studies, 75+ peer-reviewed publications, 14 awards, 20+ years of I-O psychology

3. Product suite

3.1 Match and Apply (Engage)

A chat assistant on an employer's careers site. Visitors describe what they want or upload a resume, and it suggests open roles, answers questions about jobs and benefits, asks screening questions and schedules interviews. It syncs with the employer's applicant tracking system (ATS). Example: Enovis reports reaching six times as many candidates and saving about 50 recruiter hours a week.

3.2 AI Interviewer (Screen)

Voice-based screening interviews available at any hour. A recruiter pastes in a job description, the system proposes questions and a scoring rubric, and the recruiter approves them. The AI asks questions and follow-ups, scores each answer with a short explanation, and sends results to the ATS. Supported languages include English, Spanish, French and Portuguese.

- **Governance:** humans approve requirements and review candidates; candidates can opt out of AI; audit logs and script locking; fairness checks aligned to NYC Local Law 144, EEOC guidance and the EU AI Act.

- **Reported results:** 30% fewer manager rejections, about 10 hours a week saved per recruiter, and 78% of surveyed candidates preferring an AI screen. AdventHealth reports interviewing 5.6 times as many nurses.

3.3 Assessments and Assessment Builder (Assess)

Short tasks that show skills: games for cognitive ability, language tasks, Virtual Job Tryouts for judgment, and coding exercises. The library covers 250+ skills and HireVue cites 200 million completed assessments. Assessment Builder (Feb 2026) lets employers create validated, role-specific assessments themselves in minutes. Example: Emirates reports cutting time to hire from 60 days to 7 for high-volume roles.

3.4 Video Interviewing (Interview)

The original product: on-demand and live interviews (HireVue, Zoom, Teams, Webex), no app download, invitations by SMS or WhatsApp. Interview Insights adds summaries, searchable transcripts and a live note-taking co-pilot. Keurig Dr Pepper reports 94% candidate satisfaction.

4. Platform layer

- **Cheating and fraud detection:** identity checks, browser focus tracking, copy/paste limits, AI-use detection and a combined fraud report. HireVue says these are signals for human review, not proof.
- **Integrations:** 45+ applicant tracking systems, plus HRIS and learning systems.
- **Security and compliance:** SOC 2, ISO, FedRAMP and GDPR badges; AI explainability statement and ethical principles published in its legal center.
- **Automation and services:** scheduling, routing, reminders, implementation and customer success teams.

5. Customers

Logos shown on the site include AT&T, Boeing, Delta, Home Depot, Humana, Procter & Gamble, PepsiCo, Santander, the BBC, Pfizer, IKEA, Nestlé, Emirates and AdventHealth. Use cases span hourly and high-volume, campus, technical, professional and internal mobility hiring across finance, retail, healthcare, manufacturing and the public sector. Case results quoted by HireVue: IKEA 49% higher recruiter efficiency, Nestlé 92% candidate satisfaction.

6. Pricing (third-party estimates)

HireVue does not publish prices; there is only a demo request form. The figures below come mainly from Vendr transaction data via Pin, so treat them as a range, not a quote.

Item	Estimate
Entry level (Essentials)	Around $35,000 a year
Average contract	About $49,855 a year
Typical enterprise range	$50,000 to $145,000 a year (some sources up to $175,000)
Premium with assessments	Can pass $200,000 a year
Implementation	Roughly $10,000 to $50,000
Negotiation	15% to 30% off list reported; no free trial; multi-year contracts

7. Competitors

PitchBook counts 52 competitors. The ones most often compared:

Company	What it does
Paradox	Conversational AI for apply, screening and scheduling; acquired by Workday in Aug 2025
Sapia.ai	Text-chat interviews focused on reducing bias
Mercor, micro1	AI interviewing tied to talent marketplaces
Spark Hire, Willo, Hireflix	Lower-priced video interviewing
BrightHire, Metaview	Interview notes and summaries
Greenhouse, iCIMS, Lever, Ashby	Applicant tracking suites with built-in interview features

8. SEO and content strategy

This section is based on reading HireVue's blog, one product page and the site navigation. It describes what is visible on the pages. I did not have access to ranking, traffic or backlink tools, so those are not covered.

8.1 Site structure

- **Clear URL hierarchy:** /solutions/ for products and use cases, /platform/ for features, /blog/hiring/ for articles, /resources/ for guides and case studies, /press-release/ for news.
- **Keyword-led landing pages:** each audience and industry has its own page with a search-style slug, for example /solutions/high-volume-hiring-software, /solutions/campus-recruiting-software, /solutions/healthcare-hiring and /solutions/government-recruiting-software.
- **Mega-menu navigation:** every page carries the same menu (Solutions, Platform, Use Cases, Customers, Resources, Company), so key pages are one click from anywhere and receive internal links site-wide.

8.2 On-page and technical signals

- **Unique titles and meta descriptions:** pages follow a "Topic keyword | Hirevue" title format. The hourly hiring page is titled "High Volume Hourly Hiring & Recruiting Software | Hirevue" with a description written around the same terms.
- **Canonical tags:** each page declares its own canonical URL, which prevents duplicate-content problems.
- **Indexing directives:** pages are set to index, follow, with large image and snippet previews allowed.
- **Social sharing tags:** Open Graph and Twitter card tags are set, so shared links show a title, description and image.
- **Speed and platform:** the site runs on WordPress with the WP Rocket caching and performance plugin, and uses Google Tag Manager for tracking.
- **Keywords in body copy:** headings and text work target phrases in naturally, such as "software for hiring hourly employees" and "high-volume hiring software".
- **Fresh content signals:** pages carry modified dates (for example, the hourly page was updated October 2025 and the AI Interviewer post June 2026).

8.3 Blog strategy

- **Scale:** the blog archive runs to 65 pages, with articles going back several years, so the site has built up a large body of topical content.
- **Three kinds of post:** (1) definitional "What is..." articles that target informational searches, such as inductive reasoning, job fit and employee turnover rate; (2) thought leadership on AI, fairness and

skills-based hiring, often by its in-house psychologists; (3) customer stories and webinar recaps featuring Nestlé, AdventHealth, Emirates NBD and others.

- **Product launches supported by articles:** the AI Interviewer launch on 16 June 2026 had a press release and a blog post, with follow-up posts such as "AI Interviewer reveals what an AI-polished resume can't".
- **Authority signals:** articles carry named expert authors (for example Dr. Chris Frost and Dr. Carter Gibson) and repeat the science credentials in every page footer: 1,300+ validation studies, 75+ publications and 20+ years of I-O psychology.
- **Topical coverage:** themes include AI in hiring, candidate cheating and deepfakes, early careers, seasonal and retail hiring, federal hiring and diversity.

8.4 Internal and external linking

- **Recommended Articles block:** every post ends with three related articles and a "See all" link to the blog.
- **Calls to action in articles:** each post links to the ROI Calculator ("Calculate your ROI") and the demo page ("Talk to an expert"), moving readers from content to conversion.
- **Footer links on every page:** product pages, Our Science, Success stories, Blog, Resource Library and legal pages are linked from the footer sitewide.
- **Product pages link to proof:** the hourly hiring page links to case studies (Holcim, CHOP, Cracker Barrel), a guide and the product tours.
- **External authority:** HireVue appears in press and industry sites (UNLEASH, The Agile Brand, Constellation Research), which likely supports backlinks, though backlink counts were not checked.

8.5 Content hubs beyond the blog

Hub	Path (on hirevue.com)	Purpose
Blog (65 pages of archive)	/blog	Main content hub; links to every article
Hire Thinking	/hirethinking	Thought-leadership section
Resource Library	/resources	Guides, ebooks, videos, case studies
AI in Hiring Hub	/ai-in-hiring	Topic hub for AI, ethics and regulation
2026 Hiring Report	/report	Yearly research report (gated asset)
ROI Calculator	/virtual-recruiting-roi-calculator	Interactive tool linked from articles
Press & News	/press-release	Press releases and media coverage
Events	/events	Conference and webinar pages
Product Tours	/product-tours	Interactive demos
Case Studies	/case-studies	Customer proof pages

8.6 Sample blog articles

A selection of articles read during this research. All links are on hirevue.com.

8.7 Takeaways

- Strengths: a large, well-organised blog; keyword-specific landing pages for each audience; consistent technical SEO basics; and strong internal links that lead readers to the demo and ROI pages.
- Gaps and risks: some posts are very short (the June 2026 post is a one-minute read built around a video), and several pages use gated or video content that search engines can read less easily.
- Not verified: keyword rankings, organic traffic, backlink profile and Core Web Vitals. A tool such as Ahrefs, Semrush or Google Search Console would be needed for those.

9. Things worth knowing

- **Early criticism:** HireVue scored video interviews partly on facial expression until it dropped that element in 2021 after public criticism. Comparison articles still mention it.
- **Regulation:** Tools that score named applicants fall under the EU AI Act's high-risk category and New York City's automated hiring rules; Illinois has a law on AI analysis of video interviews.
- **Vendor statistics:** most outcome numbers (such as 43% more successful hires and 5 to 10x ROI) are HireVue's own and have no independent verification.
